

## Compact pile driver

Orteco increases its range of barrier installation machines with a new compact model. At Intertraffic Amsterdam 2012 the company presented Basic, a machine which weights just 2.2 tonnes to get easier the transport from site to site.

Increased safety, high technology, efficiency and easy to handle, Basic is studied to respond to the needs of developing nations, wishing to purchase a comparatively low cost yet high quality barriers installation machine.

The new unit s powered by a 22.4 kW diesel engine that's clean-running, efficient and completely enclosed to minimize the operating noise. The basic shares all the "must" of the Orteco's brand lager barrier installation machines, always supported by the construction team to focus on customers requests.

Orteco, during Intertraffic exhibition, also celebrated it's 40 years of activity.
